

Installation and Use of the Android Prototype

We have generated a signed .apk file, so that you can easily install the application on your Android device, without the need of a development software.

First you need to go to “Settings” of your phone, press “Security” and check the box “Unknown sources”, in order to allow the installation of the application. Insert the DBCApp.apk file on your mobile (either via USB or downloading it directly on your mobile from the provided link). Now, when you press on the .apk file (in your files folder), the application should be installed successfully.

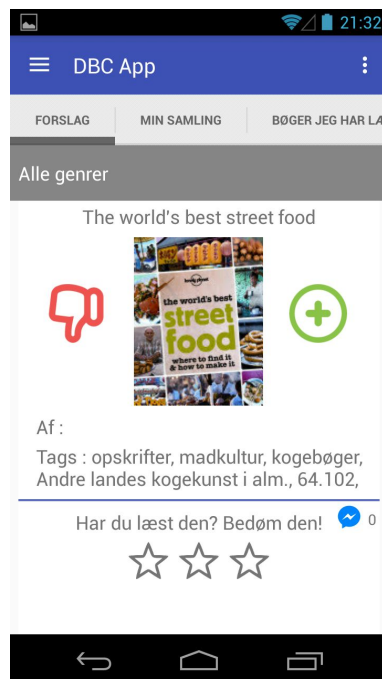

Once you have finished with the installation, remember to uncheck the “Unknown sources” box, if you do not want to install any other applications that are not included on Google Play in the future.

In order to use the app you need to have a Facebook account. Once the app is launched, you are asked to write your facebook credentials to login.

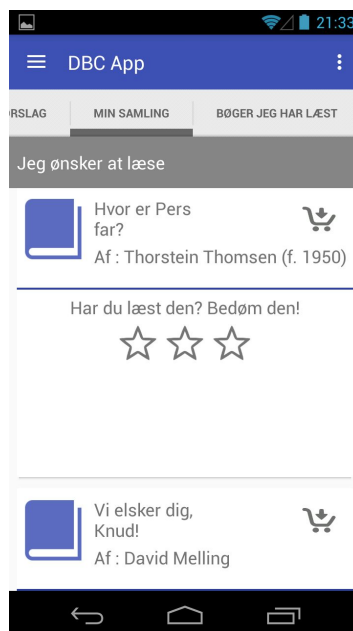

After you have logged in, 10 recommendations for you are loaded. You can either dislike the recommendation by pressing the “thumbs down” button or add the item in your library (Mit

Bibliotek) or you can rate it if you have already read it. Once you do one of these 3 actions, the card will disappear. New books will be loaded when the present cards (books) are less than two.

In “Min Samling” section you can see the books that you have added to your collection (you need to refresh the page).

By pressing the navigation button, you can choose one from the available 9 genres. Then you will receive recommendations only from the selected genre.
